Want to do something positive for cancer research?

Get into the GRIND
Graduate Research in Neuroendocrine Distress

We are studying how psychological stress can impair immune function and ultimately affect cancer vaccine efficacy.

Qualification includes:

- Residents of the Greater Seattle area
- Older than 18 years
- Fluent in English
- Planning to live in the Seattle area for one year
- Not currently an undergraduate or graduate-level student

Participants in this 10-month study need to do the following at 3 time points:

- Complete a 30 min survey questionnaire
- Have a small amount of blood drawn
- Collect saliva samples for 2 days before blood draw appointments

All participants will receive a $50 gift card to the U of W Bookstore at the completion of the study.

Principle Investigator: Bonnie McGregor, PhD
